

County-level Statistics for Arizona Adults SMART BRFSS Data 2005

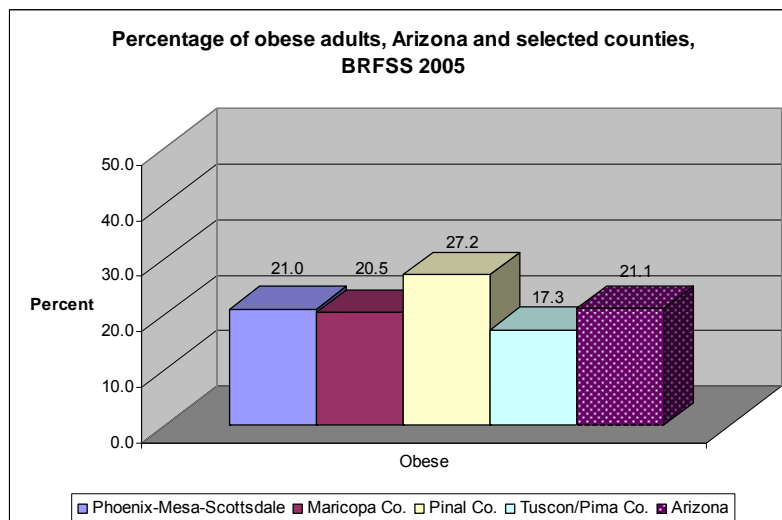

The Selected Metropolitan/Micropolitan Area Risk Trends (SMART) project uses the Behavioral Risk Factor Surveillance System (BRFSS) to analyze the data of selected metropolitan and micropolitan statistical areas (MMSAs) with 500 or more respondents. In Arizona, there are only two available MMSAs: Phoenix-Mesa-Scottsdale and Tuscon. The Phoenix-Mesa-Scottsdale area contains reliable estimates for both Maricopa and Pinal Counties, which can be analyzed jointly or independently. The Tuscon area contains reliable estimates for Pima County only.

The following graphs display four nutrition and physical activity indicators for each statistical area and county, compared to the state of Arizona. Data are taken from the 2005 Arizona BRFSS.

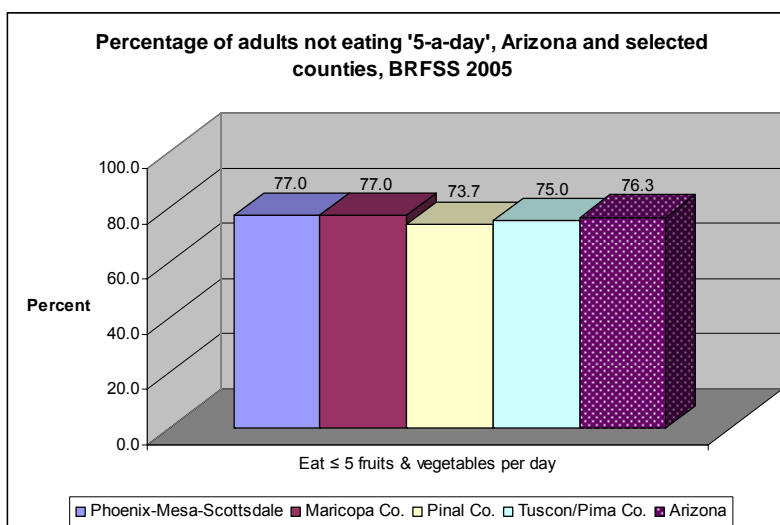

Overweight Prevalence

Obesity Prevalence

Fruit & Vegetable Consumption

Physical Activity
